SIPdroid Guide:

This only works on the android phones. Some service providers will only allow this to work on wifi. I have tested this on wifi and 3G on Verizon wireless. Using our service on a mobile device is not guarantee as for our service to be 100% reliable your bandwidth must be as well.

1. Go to the market place on your android and search for SIPdroid.
2. Download, set permissions and install.
3. Launch SIPdroid and click on the options button.
4. Click on SIP account Line 1
 - a. Authorization name is your: 10_digit_number
 - b. Password is your password
 - c. Server or Proxy is: sip.voipwelcome.com
 - d. Domain is: sip.voipwelcome.com
 - e. Username or caller ID: (I left it blank).
 - f. Port leave as 5060 on Line 1 (to use line 2 repeat these steps but change port to 5061)
 - g. Use WLAN: Check
 - h. Use 3G: Check if your provider uses 3G
 - i. Use Edge : Check if your provider uses Edge
5. Save settings.
6. Repeat for line 2 but change port to 5061.
